Professional Summary

AWS-certified cloud and infrastructure engineer with hands-on internship experience deploying, securing, and monitoring cloud environments on AWS. Proficient in system health monitoring using CloudWatch, incident troubleshooting on Linux-based EC2 instances, and automation via Bash and Python scripting. Familiar with Prometheus/Grafana concepts, Docker containerization, and VPC network security configurations. Eager to grow into an observability and infrastructure role, contributing to monitoring pipelines, alerting strategies, and operational reliability.

Technical Skills

CloudPlatforms	AWS (EC2, S3, IAM, Lambda, VPC, CloudFront, Cognito), GCP (fundamentals)
Monitoring	AWS CloudWatch, Prometheus (concepts), Grafana (concepts)
Containers	Docker (fundamentals), Kubernetes / EKS (fundamentals)
Scripting	Python, Bash / Shell, SQL
IaC	AWS CloudFormation (fundamentals), Terraform (concepts)
Networking	VPC, Security Groups, Network ACLs, subnetting, routing concepts
CI/CD	Git, GitHub, GitHub Actions (fundamentals), CI/CD Pipelines
OS & Tools	Linux (CLI, file system, networking), Git Bash, MobaXterm
Other	SAP ABAP Cloud, SAP BTP, Verilog HDL

Professional Experience

AWS Cloud Intern *at Vaidsys Technologies* May 2025 – Jun 2025

- Deployed and managed cloud infrastructure across EC2, S3, IAM, and Lambda, applying AWS Well-Architected Framework best practices for reliability, security, and cost efficiency.
- Monitored infrastructure health and resource utilization using **AWS CloudWatch**; identified and resolved performance bottlenecks proactively, contributing to improved system reliability.
- Configured Linux-based EC2 instances end-to-end — provisioning, file-system management, network troubleshooting, and CLI-driven deployment — demonstrating hands-on Linux systems administration competency.
- Designed and enforced **IAM roles, policies, and permission boundaries** following principle-of-least-privilege, securing multi-service cloud resource access.
- Automated routine cloud resource management tasks using **Bash shell scripting**, reducing manual operational overhead and enabling repeatable workflows.
- Implemented **VPC security configurations** — security groups and network ACLs — to enforce secure inter-service communication and network segmentation.
- Applied systematic root-cause analysis and incident troubleshooting workflows when diagnosing deployment and performance issues on cloud infrastructure.

VLSI Design Intern *at Maven Silicon (Virtual)* Jul 2025 – Aug 2025

- Designed an AHB-to-APB bridge using Verilog HDL and developed comprehensive functional testbenches — applying disciplined testing and debugging workflows directly analogous to infrastructure validation and automated testing pipelines.
- Applied systematic debugging and root-cause analysis to resolve RTL functional issues, reinforcing structured troubleshooting practices applicable to incident response.

Projects

Cloud-Based File Storage System on AWS 2025

- Architected a scalable, highly available file storage solution using **AWS S3, Lambda, Cognito, and CloudFront**, following AWS Well-Architected Framework principles for resilience and operational efficiency.
- Implemented role-based access control (RBAC) via Amazon Cognito user pools and identity pools to enforce secure, multi-user authentication and authorization flows.
- Automated backend file-handling workflows using **serverless AWS Lambda** functions, eliminating idle compute cost and improving processing throughput.
- Configured **CloudFront CDN** with caching policies for global content delivery, reducing end-user latency and improving application performance metrics.
- Provisioned and configured all infrastructure through AWS Management Console and CLI, establishing a repeatable deployment approach aligned with IaC principles.

SAP RAP-Based Employee Management Application 2025

- Developed a cloud-native backend application on **SAP BTP** using the ABAP RESTful Application Programming Model (RAP), exposing full CRUD operations as OData services.
- Built CDS views, behavior definitions, and service bindings; applied modular, scalable architecture patterns consistent with microservices-oriented DevOps environments.

Education

B.Tech — Electronics and Communication Engineering 2021 – 2025
NIST University, Odisha, India CGPA: 8.3 / 10

Diploma — Electrical Engineering 2018 – 2021
Balaji Institute of Technology and Science, Odisha, India 75%

Certifications

- **SAP Certified Associate** — Back-End Developer, ABAP Cloud Apr 2026 | Valid until May 2027
- **AWS Cloud Certification** — LearnTube.ai Aug 2024 | ID: DJA-B-1-1550526-0
- **Google Cloud Network Skill Badge** — Google Cloud
- **SQL (Advanced)** — HackerRank
- **Problem Solving (Python)** — HackerRank
- **Git & GitHub Bootcamp** — upGrad

Achievements

- Earned SAP Certified Associate credential, demonstrating validated enterprise cloud backend development expertise on SAP BTP.
- Successfully completed AWS Cloud internship, independently deploying, securing, and monitoring production-grade cloud infrastructure with zero guidance escalations.
- Maintained multi-cloud certifications spanning AWS, Google Cloud, and SAP BTP, reflecting a continuous-learning mindset in cloud and infrastructure technologies.
- Achieved CGPA of 8.3/10 in B.Tech Engineering, demonstrating strong analytical and problem-solving foundations essential for infrastructure engineering roles.
